

Ideal location for performance testing business start-up

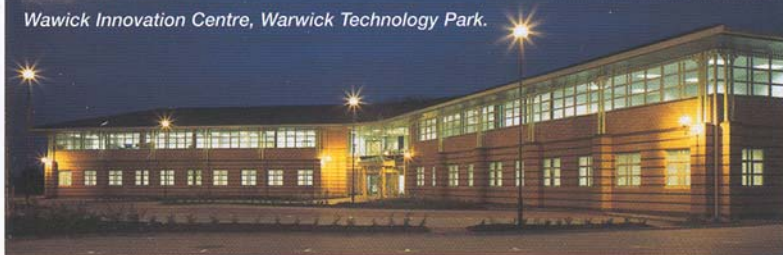

Test Today Limited (Test2day) is a business start-up, based at the Warwick Innovation Centre, that specialises in testing the performance of e-business and other computer systems. Test2day consultants design and build re-usable test assets that enable clients to understand the way their new systems will react when exposed to hundreds or thousands of 'real' users. With the results obtained clients are provided with

the information needed to remove defects and tune their system. At the same time they are able to build confidence knowing that the risks of failure have been minimised and their new system will deliver the required levels of service before taking the 'Go-live' decision.

Test2Day offer a range of services, from short duration consultancy to full performance test programmes. Their

location at Warwick Innovation Centre is ideally situated to help companies in the Midlands. They are the only specialist testing services provider in the region. The high quality service already delivered to clients by Test2Day is based on technical excellence and the experience and qualifications of their consultants. The capability of the company has been recognised by Mercury Interactive, the world's leading supplier of automated performance test tools, who have invited Test2Day to join their Channel Alliance Programme.

Test2Day can be found at www.test2day.co.uk or email info@test2day.co.uk for further information.

European Leader Makes Warwick UK Base

Developing sophisticated and comprehensive software solutions to facilitate the daily work in shipping, export and import departments has long been the aim of the company AEB. Having pursued this goal, AEB is now one of the leading European software suppliers in the fields of international trade, despatch and transport logistics.

Over the past few years, AEB have enjoyed significant growth. The number of employees has doubled, and in Germany alone 5 additional branch offices have been opened apart from the headquarters in Stuttgart. To serve the international markets, AEB have also set up offices in Singapore and in the UK, at the Warwick Innovation Centre. The Innovation Centre is the centre for all UK activities, including sales, project management and consultancy.

Peter Belz, managing director of AEB International Ltd said factors influencing

the location decision were the services offered, the university links and the proximity to the Midlands transport network. "We aim to expand further into English speaking markets and the Warwick operation is key to that," he explains.

"Gaining competitive advantages becomes increasingly important in a globalising world," continues Peter Belz, "Shipping goods to far-away countries in a fast, reliable and efficient way is an essential economic factor." With the latest version of ASSIST4, AEB make an

important contribution to this ambitious goal.

AEB have installations worldwide, and customers include household names such as Boots, Gillette, Dunlop, BAT and Pirelli.

As the business world is increasingly driven by technology and globalisation, AEB intend to continue enabling and supporting communication, trade, and compliance for companies worldwide well into the future.
